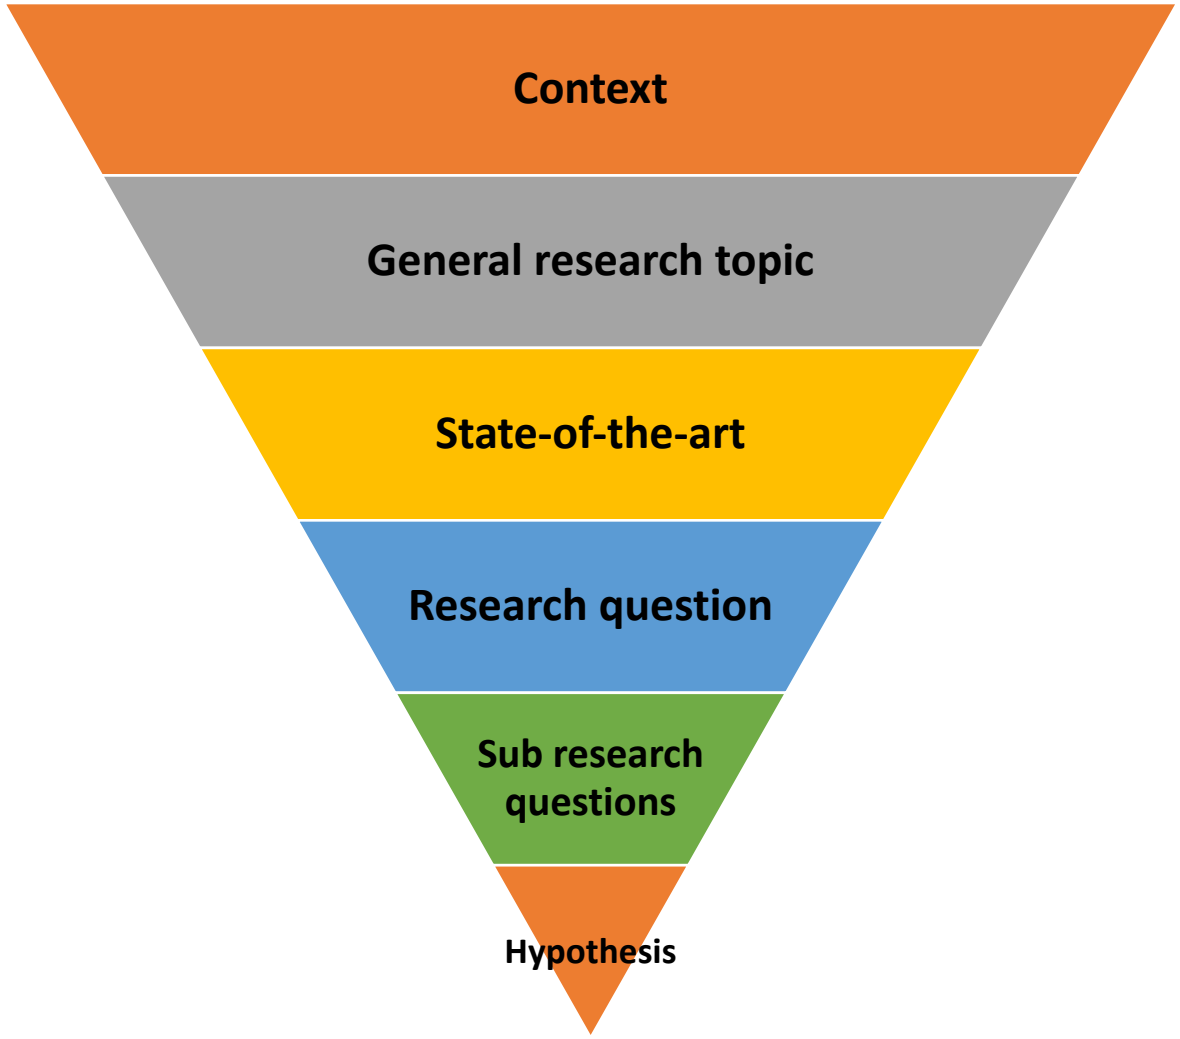
Previously on INFOB302…

UNIVERSITÉ DE NAMUR

Building a research question

- Context and general topic
- Check the state-of-the-art
- Narrow down to a specific niche to focus on
- Identify a research problem to address
- Formulate the research question



Research method

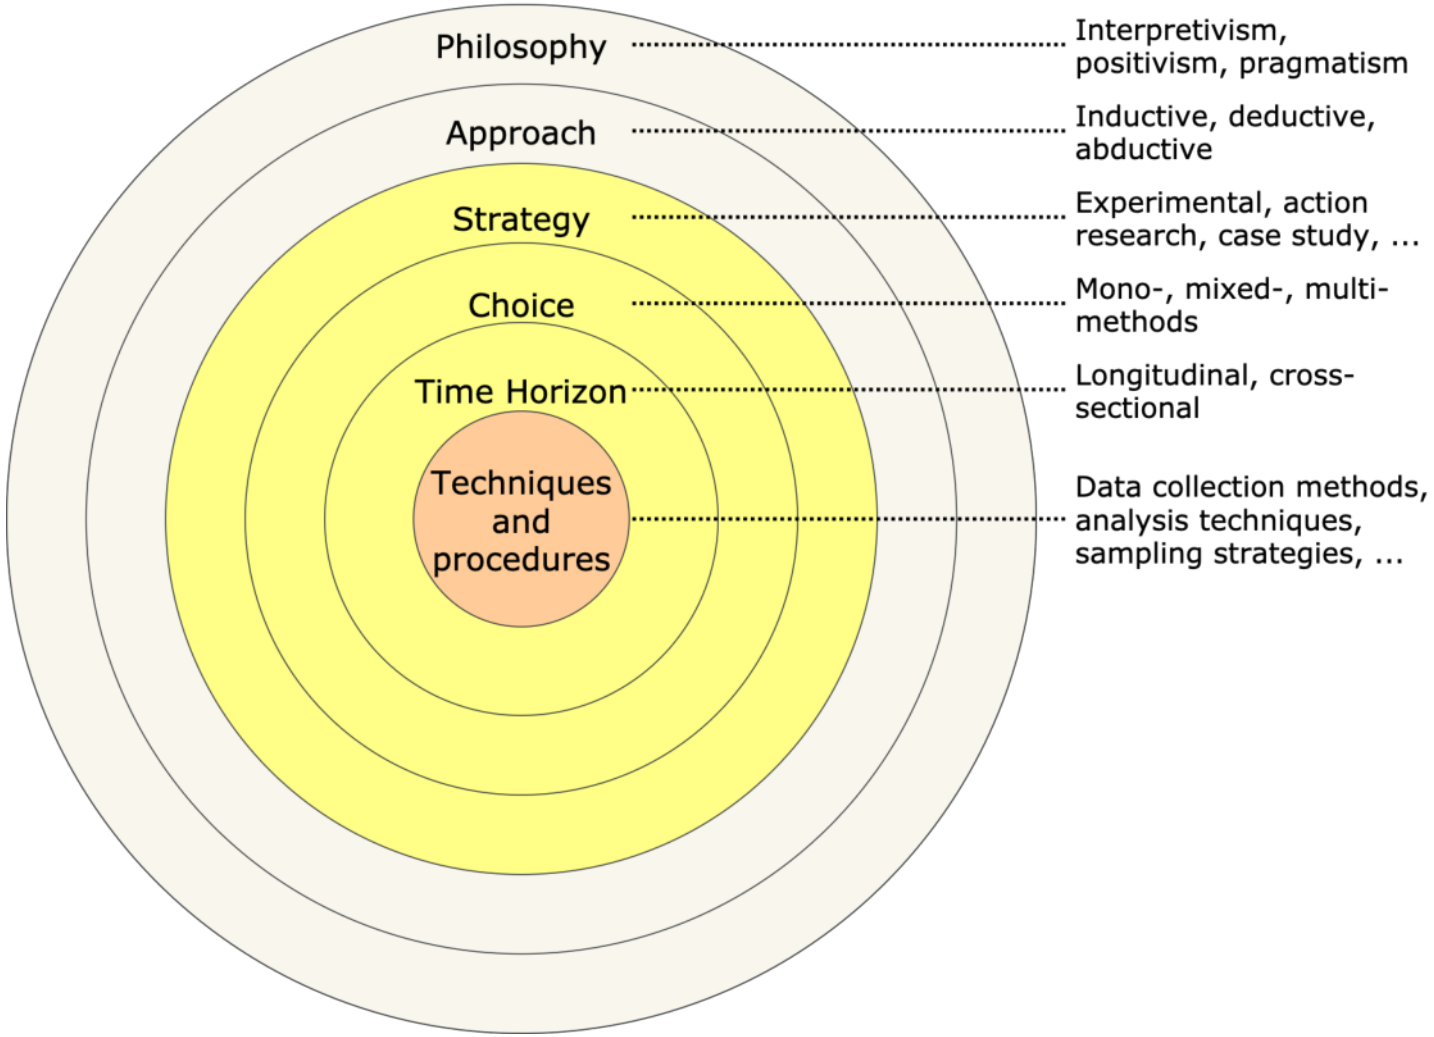
Maximize confidence in the findings

Decrease the threats to the validity

- What *confidence*?
- What *threats*?
- How?

- … it depends 🤷

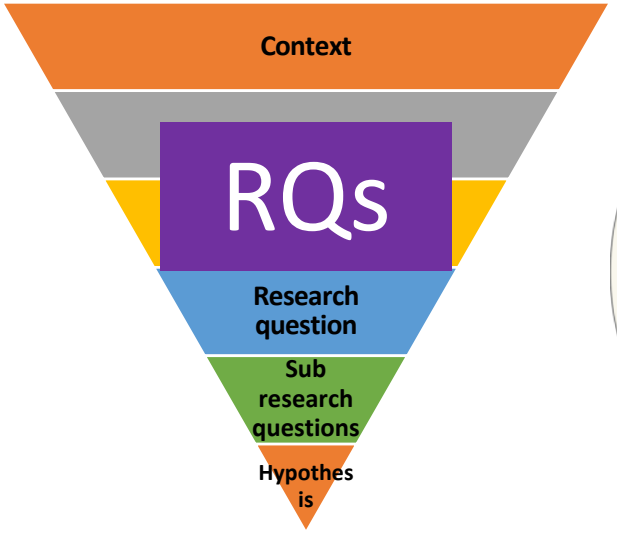
Onion model (Saunders et al.)

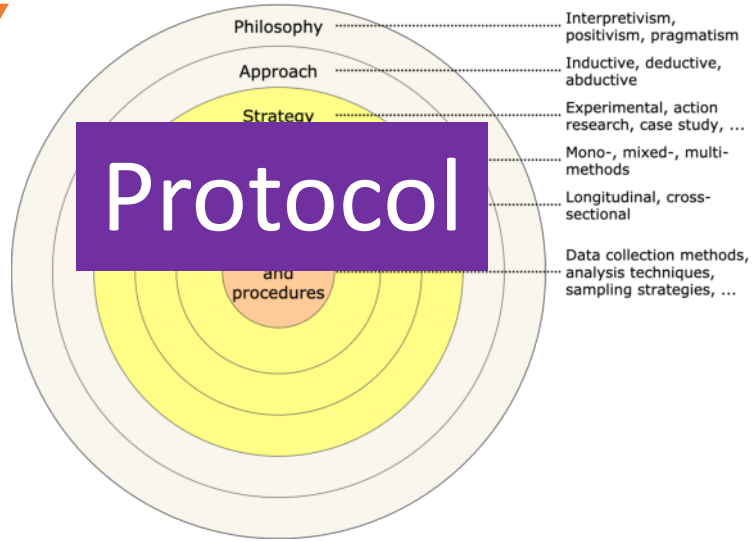


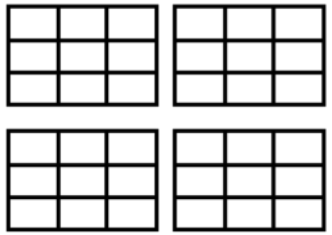
Peer review process

UNIVERSITÉ DE NAMUR

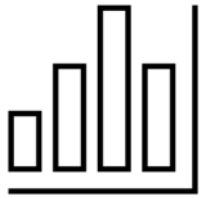
Submitting a paper: where?







Data



Analysis

Submitting a paper to a conference

- Conference proceedings in computer science are peer-reviewed
  - It is not always the case!
- Scope of the paper is limited
- Content fits in 8-10 pages
- Topic of the paper fits within the scope of the conference
  - General conferences
  - Specialised conferences/symposiums/workshops

Example: ICSE 2022

https://conf.researchr.org/home/icse-2022

Tracks

Co-located (specialised) conferences

Workshops

ICSE 2022

- Keynotes
- Technical Track
- Artifact Evaluation
- DEMO - Demonstrations
- NIER - New Ideas and Emerging Results
- SEET - Software Engineering Education and Training
- SEIP - Software Engineering in Practice
- SEIS - Software Engineering in Society
- Journal-First Papers
- SRC - ACM Student Research Competition
- DS - Doctoral Symposium
- NFS - New Faculty Symposium
- Workshops
- SMeW - Student Mentoring Workshop
- Posters
- Student Volunteers
- Open Science Policies
- Submitting to ICSE2022: Q&A

Co-hosted Conferences

- AST
- CAIN
- CHASE
- FormaliSE
- ICPC
- MOBILESoft
- MSR
- TechDebt

Workshops

- APR
- BotSE
- DREE
- EMIP
- EnCyCriS

- SEENG
- SERP4IoT
- SESoS
- WETSEB

Co-hosted Symposia

- SEAMS

ICSE 2022 Technical Track: call for papers

Call for Papers

ICSE is the premier forum for presenting and discussing the most recent and significant technical research contributions in the field of Software Engineering. In the technical track, we invite high quality submissions of technical research papers describing original and unpublished results of software engineering research.

Please note the following important changes for 2022:

1. Point out the **significance of your research contributions** (see review criteria).
2. Follow our **open science policy** – share data and justify if you do not.
3. Give your submission a **unique title** that is different from preprints and talks.

Research of Interest

ICSE welcomes submissions addressing topics across the full spectrum of Software Engineering, being inclusive of quantitative, qualitative, and mixed-methods research. Topics of interest include:

- **AI and software engineering**, including
  - Search-based software engineering
  - Machine learning with and for SE
  - Recommender systems
  - Autonomic systems and self adaptation
  - Program synthesis
  - Program repair
  - Software fairness
- **Testing and analysis**, including
  - Software testing
  - Program analysis
  - Debugging and Fault localization
  - Programming languages
  - Performance
  - Mobile applications
- **Software analytics**, including
  - Mining software repositories
  - Apps and app store analysis
  - Software ecosystems
  - Configuration management
  - Software visualization
- **Software evolution**, including
  - Evolution and maintenance
  - API design and evolution
  - Release engineering and DevOps
  - Software reuse
  - Refactoring
  - Program comprehension
  - Reverse engineering
- **Social aspects of software engineering**, including
  - Human aspects of software engineering
  - Human-computer interaction
  - Distributed and collaborative software engineering
  - Agile methods and software processes
  - Software economics
  - Crowd-based software engineering
  - Ethics in software engineering
  - Green and sustainable technologies
- **Requirements, modeling, and design,** including
  - Requirements Engineering
  - Privacy and Security by Design
  - Modeling and Model-Driven Engineering
  - Software Architecture and Design
  - Variability and product lines
  - Software services
- **Dependability**, including
  - Formal methods
  - Validation and Verification
  - Reliability and Safety
  - Privacy and Security
  - Embedded and cyber-physical systems

ICSE 2022 Technical Track: call for papers

Review Criteria

Each paper submitted to the Technical Track will be evaluated based on the following criteria:

- **Soundness**: The extent to which the paper's contributions and/or innovations address its research questions and are supported by rigorous application of appropriate research methods
- **Significance**: The extent to which the paper's contributions can impact the field of software engineering, and under which assumptions (if any)
- **Novelty**: The extent to which the contributions are sufficiently original with respect to the state-of-the-art
- **Verifiability and Transparency**: The extent to which the paper includes sufficient information to understand how an innovation works; to understand how data was obtained, analyzed, and interpreted; and how the paper supports independent verification or replication of the paper's claimed contributions
- **Presentation**: The extent to which the paper's quality of writing meets the high standards of ICSE, including clear descriptions, as well as adequate use of the English language, absence of major ambiguity, clearly readable figures and tables, and adherence to the formatting instructions provided below.

Reviewers will carefully consider all of these criteria during the review process, and authors should take great care in clearly addressing them all. The paper should clearly explain the claimed contributions, and how they are sound, significant, novel, and verifiable, as described above.

For more information on how the ICSE PC will interpret and use these criteria in the paper evaluation process, see the ICSE 2022 Review Process and Guidelines.

How to Submit

All authors should use the official "ACM Primary Article Template", as can be obtained from the ACM Proceedings Template page. LaTeX users should use the `sigconf` option, as well as the `review` (to produce line numbers for easy reference by the reviewers) and `anonymous` (omitting author names) options. To that end, the following LaTeX code can be placed at the start of the LaTeX document:

```
\documentclass[sigconf,review,anonymous]{acmart}
```

```
\acmConference[ICSE 2022]{The 44th International Conference on Software Engineering}{May 21–29, 2022}{Pittsburgh, PA, USA}
```

- All submissions must not exceed 10 pages for the main text, inclusive of all figures, tables, appendices, etc. Two more pages containing only references are permitted. All submissions must be in PDF. Accepted papers will be allowed one extra page for the main text of the camera-ready version.
- Submissions **must strictly conform to the ACM formatting instructions**. Alterations of spacing, font size, and other changes that deviate from the instructions may result in desk rejection without further review.
- By submitting to the ICSE Technical Track, authors acknowledge that they are aware of and agree to be bound by the ACM Policy and Procedures on Plagiarism and the IEEE Plagiarism FAQ. In particular, papers submitted to ICSE 2022 **must not have been published elsewhere and must not be under review or submitted for review elsewhere whilst under consideration for ICSE 2022**. Contravention of this concurrent submission policy will be deemed a serious breach of scientific ethics, and appropriate action will be taken in all such cases. To check for double submission and plagiarism issues, the chairs reserve the right to (1) share the list of submissions with the PC Chairs of other conferences with overlapping review periods and (2) use external plagiarism detection software, under contract to the ACM or IEEE, to detect violations of these policies.
- The ICSE 2022 Technical Track will employ a **double-anonymous review process**. Thus, no submission may reveal its authors' identities. The authors must make every effort to honor the double-anonymous review process. In particular:
  - **Authors' names** must be omitted from the submission.
  - All **references** to the author's prior work should be in the third person.
  - Authors are encouraged to **title their submission differently** than preprints of the authors on ArXiV or similar sites. During review, authors **should not publicly use the submission title**.

  Further advice, guidance, and explanation about the double-anonymous review process can be found in the Q&A page.
- By submitting to the ICSE Technical Track, authors acknowledge that they conform to the authorship policy of the ACM, and the authorship policy of the IEEE.

Submissions to the Technical Track that meet the above requirements can be made via the Technical Track submission site (https://icse2022.hotcrp.com) by the submission deadline. **Any submission that does not comply with these requirements may be desk rejected without further review.**

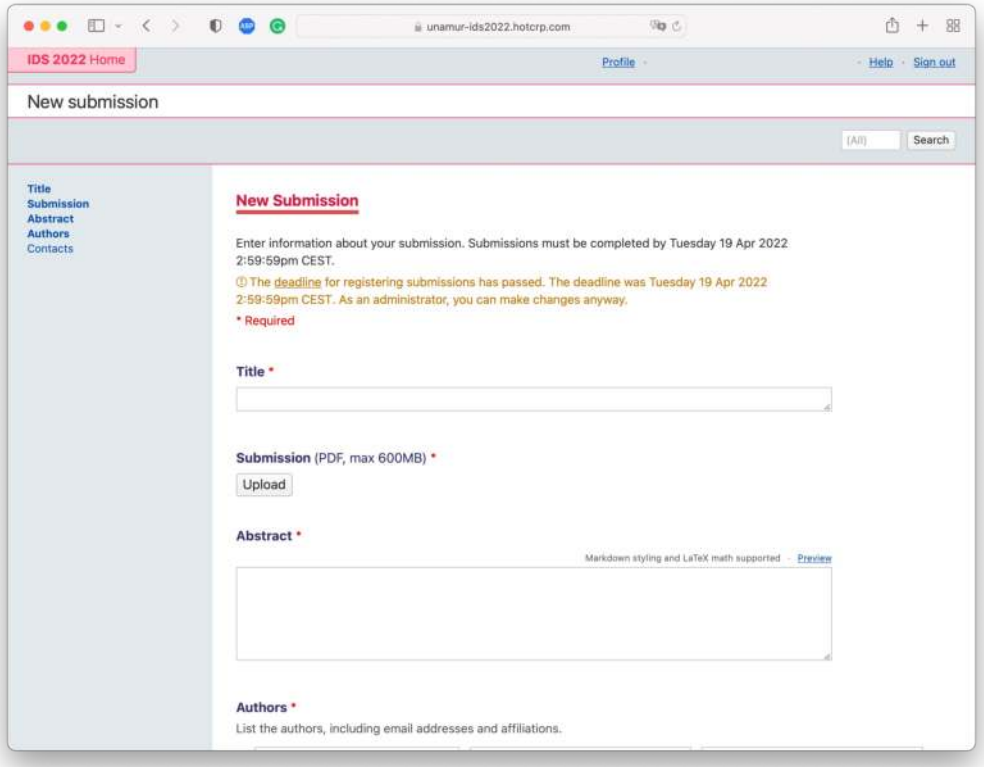
We encourage the authors to upload their paper info early (and can submit the PDF later) to properly enter conflicts for double-anonymous reviewing. Authors are encouraged to try out the experimental SIGSOFT Submission Checker to detect violations to the formatting and double anonymous guidelines. (Mind that the tool is based on heuristics. Therefore it may miss violations, and it can raise false alarms. The requirements listed in

Conference review process: submission

Submit the paper

Paper

Declare conflicts of interest

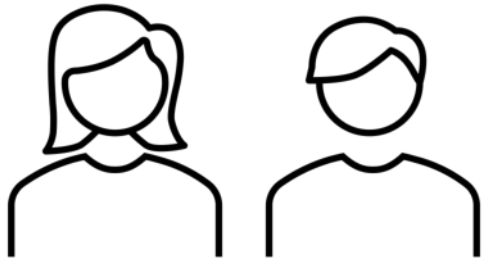


Conflict of interest (COI)

A COI occurs when a person's objective judgment is — or is perceived by a reasonable observer to be — compromised by an existing relationship, affiliation, or connection to a person whose work they must evaluate.
Conflict of Interest Policy for ACM Publications

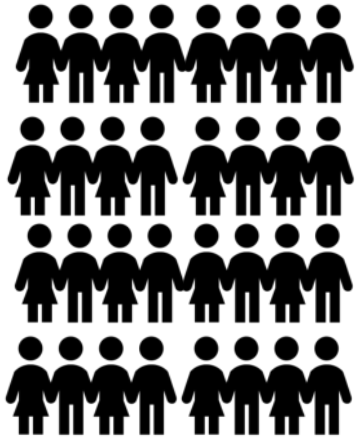
- Notable personal or professional rivalry/animosity (publicly known or not)
- The lifelong relationship between Ph.D. student and Ph.D. supervisor
- Personal or family relationships that would reasonably cause others to doubt impartiality
- Potential for financial gain or significant recognition, personally or for a close associate or family member
- Within the last two years or reasonably expected within the next year:
  - Working closely together (e.g., at the same institution, company or organization; or within the same organizational team)
  - Supervisor/Supervisee relationship exists
  - Funder or program manager/awardee relationship exists
  - Recipients of joint funding or significant professional collaboration
  - Joint authorship of an archival publication (e.g., an item having a DOI)

Paper bidding, assignments and review



Program Committee chairs

2. Assign papers to reviewers



Program Committee

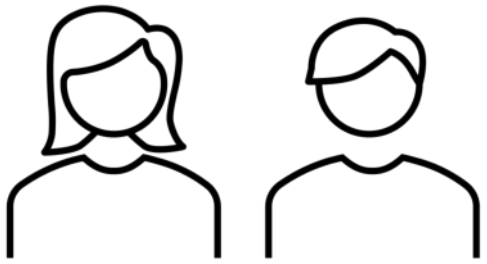
1. Indicates review preferences (bidding)

3. Review assigned papers and give a score

4. Discuss the paper with other reviewers

Decision and program

- Based on the reviews and discussions
  - Usually at least 3 different reviewers
- Decide if the paper is
  - Accepted to be included in the conference proceedings
  - Rejected
  - (Conditionally accepted)
- Makes the program of the conference
  - Distribute paper presentations between sessions
  - Invite keynote speakers
  - …



Program Committee chairs

ICSE 2022 Technical Track

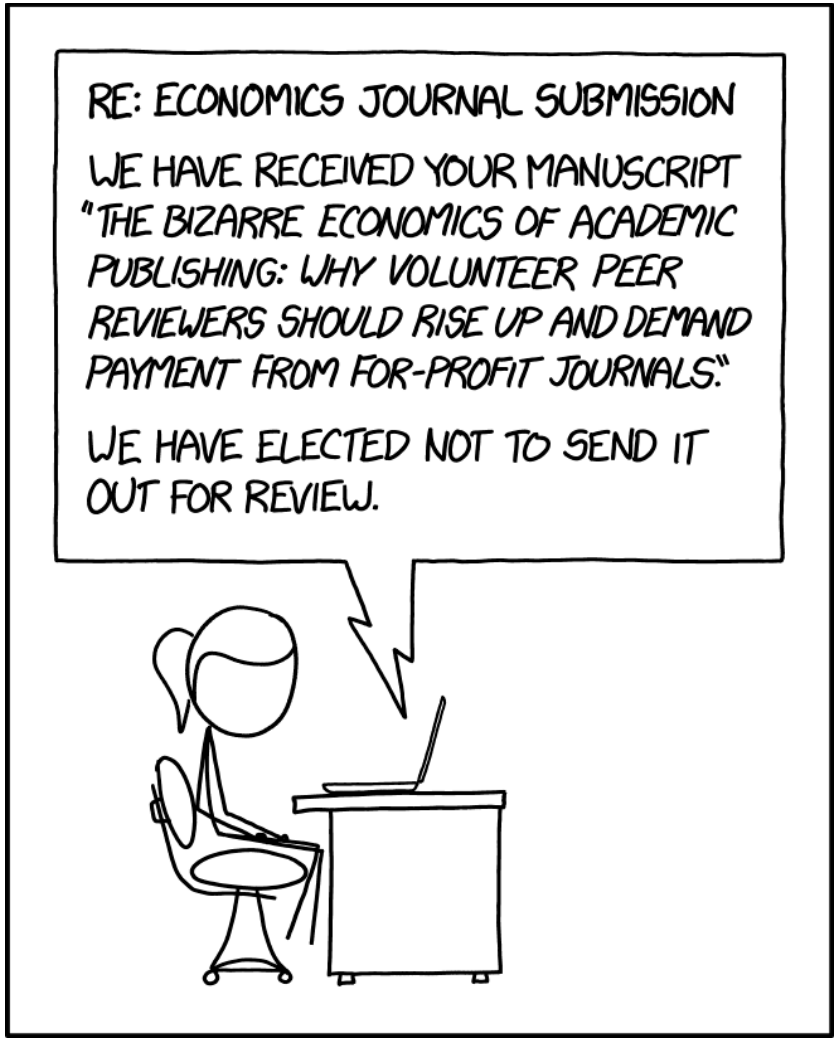
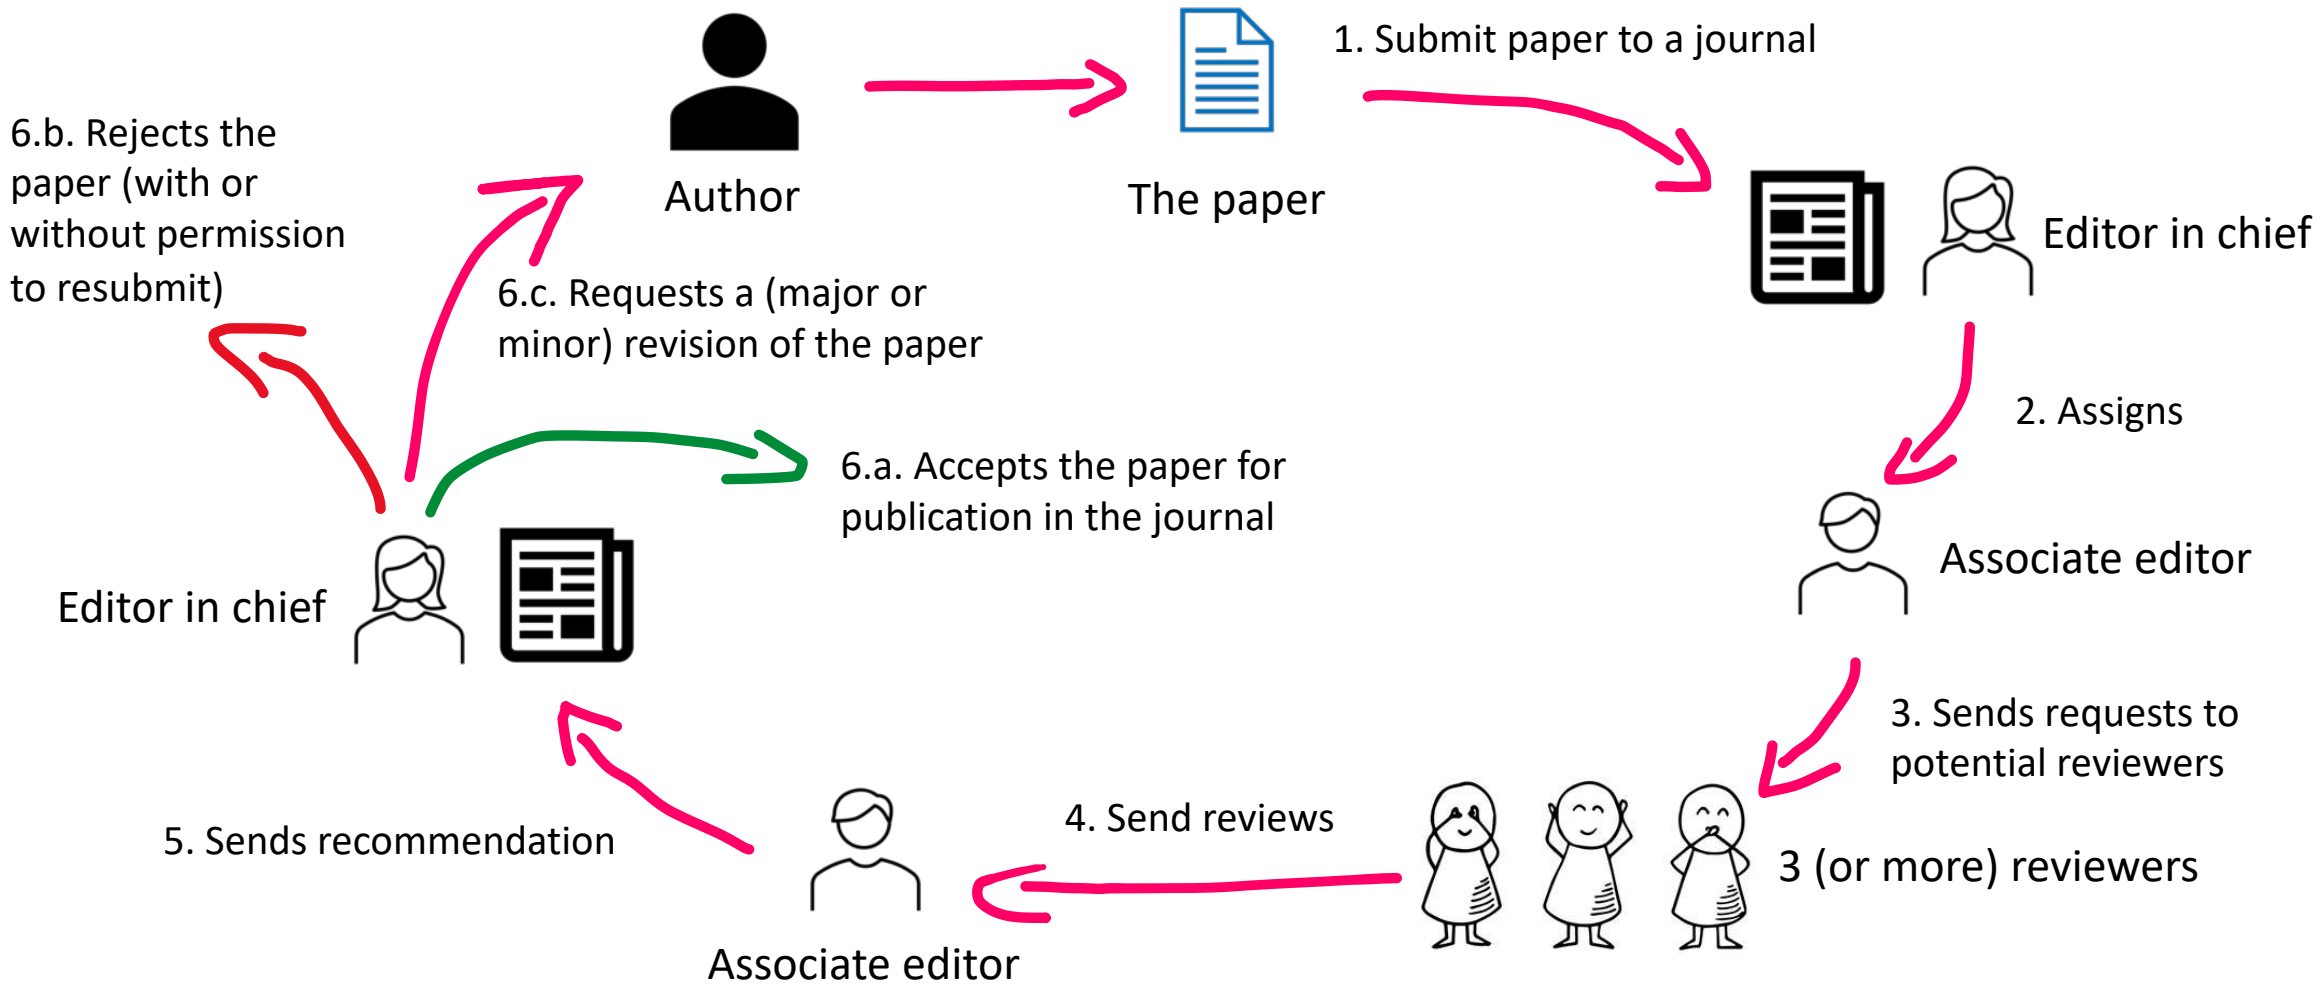
Submitting a paper to a journal

- Scope of the paper is broader
- Content fits in more than 8-10 pages
- Pick the right journal
  - General research area
    - Software engineering
  - Specialised topics
    - Software testing



Review process



Conference v.s. Journal submission

- Conference submission
- (relatively) Fast
  - 3-5 months
- One shot
- Presentation of the work at the conference

- Journal submission
- Longer
  - 6-12 months
- Intermediate revisions possible
- Need to submit the published paper to a journal-first track

Single, double, and triple anonymous

- Single-anonymous
  - Authors do not know who the reviewers are
  - Reviewers know who the authors are
- Double-anonymous
  - Authors do not know who the reviewers are
  - Reviewers do not know who the authors are
    - It is up to the authors to double-blind their paper
- Triple-anonymous
  - Authors do not know who the reviewers are
  - Reviewers do not know who the authors are
  - Reviewers do not know who the other reviewers are
- Open review
  - Reviews might be signed or not and are published with the paper

Reviewing a paper

UNIVERSITÉ DE NAMUR

Rule number one: Nothing personal

- It is about the research and only about the research
- As an author: never ever take it personally
- As a reviewer
  - Write a review about the paper, not about the authors
    - "~~the authors should describe~~" → "the paper should describe"
  - Leave your personal feelings and believes out
    - "~~I find this topic interesting~~"
- As a PC chair / associate editor
  - Take care of the quality of the reviews
- The end goal is to improve the paper

ICSE Technical Track: call for papers

Review Criteria

Each paper submitted to the Technical Track will be evaluated based on the following criteria:

- **Soundness**: The extent to which the paper's contributions and/or innovations address its research questions and are supported by rigorous application of appropriate research methods
- **Significance**: The extent to which the paper's contributions can impact the field of software engineering, and under which assumptions (if any)
- **Novelty**: The extent to which the contributions are sufficiently original with respect to the state-of-the-art
- **Verifiability and Transparency**: The extent to which the paper includes sufficient information to understand how an innovation works; to understand how data was obtained, analyzed, and interpreted; and how the paper supports independent verification or replication of the paper's claimed contributions
- **Presentation**: The extent to which the paper's quality of writing meets the high standards of ICSE, including clear descriptions, as well as adequate use of the English language, absence of major ambiguity, clearly readable figures and tables, and adherence to the formatting instructions provided below.

Reviewers will carefully consider all of these criteria during the review process, and authors should take great care in clearly addressing them all. The paper should clearly explain the claimed contributions, and how they are sound, significant, novel, and verifiable, as described above.

For more information on how the ICSE PC will interpret and use these criteria in the paper evaluation process, see the ICSE 2022 Review Process and Guidelines.

ICSE Technical Track: call for papers

Review — *Soundness*

The extent to which the paper's contributions and/or innovations address its research questions and are supported by rigorous application of appropriate research methods

The paper should answer the questions it poses, and it should do so with rigor in its research methodology (including choosing an appropriate research methodology and procedures). This is an important difference between research papers and other kinds of knowledge sharing (e.g., experience reports), and the source of certainty researchers can offer.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Soundness*

Note that **soundness is relative to claimed research contributions**. For example, if a paper claims to have provided evidence of causality, but its methods did not do that, that would be grounds for critique. But if a paper only claimed to have found a correlation, and that correlation is a notable discovery that future work could explain, critiquing it for not demonstrating causality would be inappropriate.

In general, the **extent of evaluation required** is relative to the novelty of the ideas:

- A novel idea with great potential can make a very valuable paper even with only preliminary evaluation, whereas
- An incremental idea might need more support.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Significance*

The extent to which the paper's contributions can impact the field of software engineering, and if needed, under which assumptions

This definition of significance is **new for ICSE 2022**, and stronger than in previous ICSEs. (Hint: we take this seriously.)

In all generality, impact relates to advances in the practice of software engineering (including making software less costly, more maintainable, more reliable, more reusable, safer, more secure, more usable … – this is not an exhaustive list)

Note that it is the **authors' responsibility** to explain and interpret the significance of their contributions, why they matter, what their potential impact will be, and under which assumptions.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Significance*

We expect papers to be *significant*. Hence, you should evaluate how their contributions can **impact software engineering practice** (which can also be indirectly, e.g. through research contributions). Therefore:

- **Take the perspective of the targeted stakeholder**: How would this advance our knowledge? How could this impact my work? Under which assumptions?
- **Do** assess technical contributions in light of **all** involved costs and risks. Weigh reported utility against required effort for setup and maintenance.
- **Assess** technical contributions not only by their evaluation results, but also by the **potential impact** of the underlying ideas.
- **We welcome insights** about the **practice of software engineering**, notably in industry.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Significance*

We expect papers to be *significant*. Hence, you should evaluate how much their contributions *can* impact software engineering. Therefore:

- **Do** consider that the path towards impact may be **long and winding**, and subject to several assumptions.
- **Do** consider that impact can also result through **methodological contributions.**
- **Be cautious about** accepting a paper that has little significance.
- **But dare to fight** for papers that can be significant, even if they may have other weaknesses – no novel work is perfect from the beginning.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Novelty*

The extent to which the contributions are sufficiently original with respect to the state-of-the-art

Grounded in adequate review of prior work in a respective topic, it is up to the authors to convince you that the discoveries advance our knowledge in some way, whether it sheds more light on prior work, or adds a significant new idea.

Secondarily, there should be **someone who might find the discovery interesting**. It does not have to be interesting to you, and you do not have to be 100% confident that an audience exists. **A possible audience** is sufficient for publication, as the PC does not necessarily perfectly reflect the broader audience of readers.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Novelty*

Because advances can come in many forms, there are many critiques that are inappropriate in isolation (if many of these apply, they may justify rejection). But:

- **We welcome original ideas** that have a clear potential of impacting the field of Software Engineering.
- **Avoid** penalizing a paper because a single paper was already published on the topic. Discoveries accumulate over many papers, not just one.
- **Avoid** penalizing "immature" work that contributes a really new idea for not yet having everything figured out about it. That can require multiple papers.
- **Avoid** penalizing work because you don't think the results are generalizable enough or were only done in a specific context. Generalizability takes time, and some types of qualitative work don't intend generalizability.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Novelty*

Because advances can come in many forms, there are many critiques that are inappropriate in isolation (if many of these apply, they may justify rejection). But:

- **Avoid** dismissing investigations of phenomena you personally don't like (e.g., "I hate object-oriented languages, this work doesn't matter").
- **Avoid** penalizing papers because they add only a few data points to our base of knowledge. Such data points can be difficult to obtain and thus be valuable.
- **We welcome independent replications** of previous work, because they shed more light into certainty and validity of important previous research.
- Therefore, avoid penalizing work for "only" being a replication.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Novelty*

Because advances can come in many forms, there are many critiques that are inappropriate in isolation (if many of these apply, they may justify rejection). But:

- **Do not** reject papers just because it has **negative results**. Check whether they are original with respect to the state-of-the-art.
- **Do not** reject papers because the **novel idea is simple.** "Simple" does not equate with "trivial" – some of the best ideas are simple. Assess their novelty.
- **Do not** reject papers because you can **imagine another (yet nonexisting) technique** that could have solved the problem.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Novelty*

Papers should both cite **relevant related work** and explicitly show how it relates to the paper's questions. After reading the paper, you should feel more informed about the related literature and how that literature is related to the paper's contributions.

- Identify related work the authors have missed and include it in your review.
- Missing a paper that is relevant, but would not dramatically change the paper, is not sufficient grounds for rejecting a paper. Such citations can be added upon reviewers' request prior to publication.
- Focus on missing related work that would significantly alter research questions, analysis, or interpretation of results.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Novelty*

Published work that is **not peer-reviewed** ("grey literature" including arXiv preprints, theses, blog posts, or tech reports) cannot be taken into account for judging novelty.

- **Do not** downgrade or reject papers because there is some non peer-reviewed paper the authors do not adequately cite or compare against.
- **Do** ask authors to **point to these works,** as they would be informative for readers (and for tracing back the history of a concept).
- However, if the published technique already is in **widespread use** (e.g. as a tool, method, or product), the submission must be novel with respect to this state of practice.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Verifiability and Transparency*

The extent to which the paper includes sufficient information to understand how an innovation works; to understand how data was obtained, analyzed, and interpreted; and how the paper supports independent verification or replication of the paper's claimed contributions.

This aims to check whether the described research is *recoverable*. You should be able to understand most of the key details about how the authors conducted their work, how they made their invention possible, or how the research findings were inferred from the collected evidence. This is key for replication and meta-analysis of studies underpinned by the positivist or post-positivist approaches. For interpretivist works, it is also key for evaluating qualitative work. Focus your critiques on omissions of research process or innovation details that would significantly alter your judgement of the paper's validity, or the *credibility* of results for research that uses qualitative methods.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Verifiability and Transparency*

Because there are always more details a paper can describe about its methods:

- **Welcome tools and data** that are available and usable at reviewing time.
- If the **paper contains sufficient detail** then data is secondary
- Welcome work whose authors have made extra efforts to make it **replicable and verifiable.**
- **Avoid** penalizing a paper for not describing *every* detail, recognizing that some details are more important than others and space is limited.
- **Avoid** asking authors to write substantially new method details *unless* there is space to add those details within the length restrictions.
- **Avoid** penalizing papers only because their data is not available. (More on that in the Open Science Policies slides.)

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Presentation*

The extent to which the paper's quality of writing meets the high standards of ICSE, including clear descriptions, as well as adequate use of the English language, absence of major ambiguity, clearly readable figures and tables, and adherence to the formatting instructions provided below.

Papers also need to be clear and concise, and comprehensible to diverse audiences.

We recognize that not all authors are fluent English writers. But if the language issues make the paper not comprehensible, it is not yet ready for publication.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Presentation*

Because submissions should be clear *enough*:

- **We welcome honest discussions** on the assumptions, limitations, and novelty of an approach
- **We welcome detailed explanations** that will allow others to build on the given work

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review — *Presentation*

Because submissions should be clear *enough*:

- **Avoid** penalizing a paper for having easily fixable spelling and grammar issues.
- **Avoid** penalizing a sufficiently clear paper because it could be clearer. All writing can be clearer in some way!
- **Avoid** penalizing a paper for not using all of the available page count. It is okay if a paper is short but significant!
- **Avoid** asking for more detail unless you are certain there is space; if there is not enough space, provide concrete suggestions for what to cut.
- **Avoid** penalizing a paper for not following a particular paper structure or order of sections.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review – *Recommendation*

"Based on the criteria above, this paper should be published at ICSE."

Based on all of the previous criteria, decide how strongly you believe the paper should be accepted or rejected, assuming authors make any modest, straightforward minor revisions you and other reviewers request before publication.

- Papers that meet all of the criteria should be *strongly accepted* (though this does not imply that the paper is perfect).
- Papers that fail to meet most of the criteria should be *strongly rejected*.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review – *Scores*

For scoring, we follow the common "Identify the Champion" scores:

- 4. **Accept** – this paper should be accepted
- 3. **Weak accept** – this paper may be accepted, but I will not fight for it
- 2. **Weak reject** – this paper may be rejected, but I will not fight against it
- 1. **Reject** – this paper should be rejected

To get the paper accepted, **at least one reviewer will have to champion the paper.** An explicit "Accept" score is not required; it can also emerge in the discussion.

Scores are revealed to the authors during the author response period, so they can focus their response appropriately.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review – *Scores*

Because each paper should be judged on its own:

- **Don't** recommend accepting a paper because it was the best in your set. It is possible that none of your papers sufficiently meet the criteria.
- **Don't** recommend rejecting a paper because it falls under some assumed quota.

There is no set quota: Your job is not to "find the best paper(s) in your pile". The PC chairs will devise a program for *however* many papers sufficiently meet the criteria, whether that is 50 or 300. Your job is to find **all** submissions worthy of archiving and sharing for the community to build upon – which includes none or all of your papers.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review – *Expertise*

Additionally, we ask for your **expertise** on the paper's topic:

- **X.** I am an **expert** on this topic (know the related work well)
- **Y.** I am **knowledgeable** on this topic.
- **Z.** I am an **informed outsider**.

Note that X/Y/Z denotes your *expertise*, not your *confidence* in your judgment. If you lack confidence, *state this in a comment for your co-reviewers*, pointing out possible reasons. Your co-reviewers may clarify things for you – or chime in.

Your X/Y/Z expertise is not sent out to authors.

https://conf.researchr.org/getImage/icse-2022/orig/ICSE+2022+Review+Process+and+Guidelines-2.pdf

ICSE Technical Track: call for papers

Review – *Expertise*

It is not necessary that all reviewers be experts – it can be useful to have some non-expert reviews to evaluate a paper's accessibility to a general audience.

If *all* reviewers are non-experts, though, chances of finding a champion are low. Area chairs and PC chairs will assess the case and may assign extra reviewers.

In case of **interdisciplinary research**, it is common to have reviewers who do not cover all disciplines. Be sure to discuss with co-reviewers as soon as possible and let us know if additional expertise is needed.

ICSE Technical Track: call for papers

Review — *Plagiarism*

If after reading a submission, you suspect that it has in some way plagiarized from some other source, do the following:

- Read the ACM guidelines on Plagiarism, Misrepresentation, and Falsification
- If you think there is a potential issue, **write the PC chairs to escalate the potential violation**, and share any information you have about the case.
- The chairs will investigate and decide as necessary prior to the acceptance notification deadline.

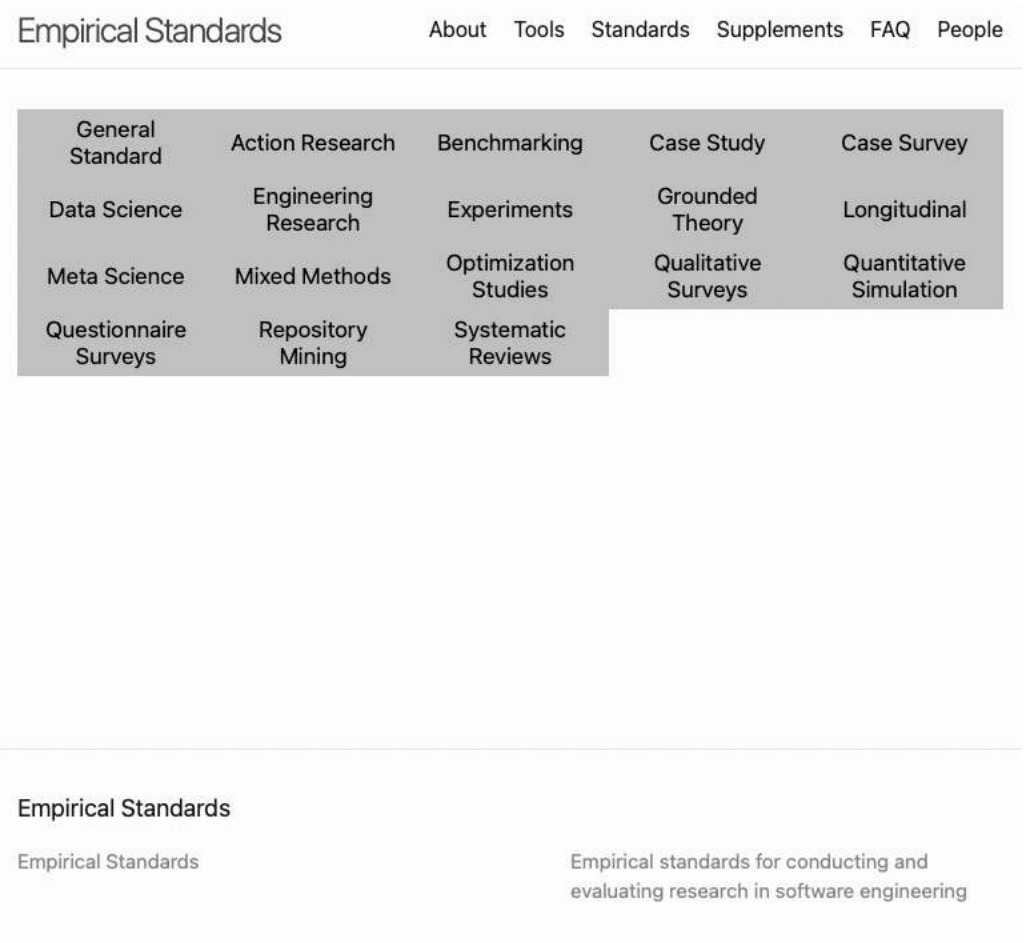
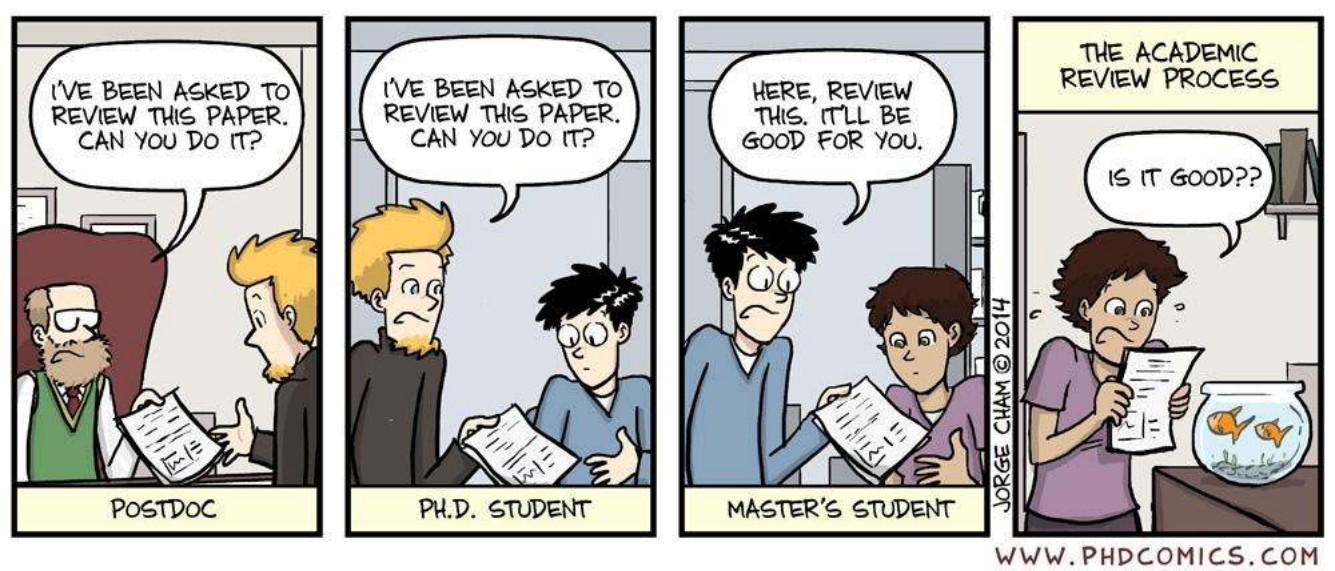
Empirical Standards (for SE research)

- https://acmsigsoft.github.io/EmpiricalStandards/docs/
- Standardizes peer-reviewing
- Authors declare their research methods
- Reviewers receive a specific checklist
- Goal: reduce review time and biases



D6 Revue par les pairs



UNIVERSITÉ DE NAMUR

Consignes

- **Une évaluation par les pairs visera principalement à l'amélioration du rapport**. Ce qui veut dire, que si les évaluatrices·eurs pointent des faiblesses dans le rapport, iels doivent également suggérer des mesures permettant de pallier ces faiblesses.
- Chaque membre du groupe évaluera le rapport de pré-enregistrement d'un autre groupe. Chaque groupe produira donc 3 *reviews* au total.

Consignes

- L'évaluation se basera sur le rapport et la *pre-submission checklist* fournie par les auteur·e·s afin d'évaluer le rapport de pré-enregistrement selon les 3 aspects suivants (adaptés des critères d'évaluation donnés par l'*International Conference on Software Engineering*) :
  - ***Soundness***
  - ***Verifiability and Transparency***
  - ***Presentation***
- Concrètement, pour chaque critère de la *pre-submission checklist*, il vous des demandé de vérifier qu'il est bien satisfait ou que les déviations sont raisonnables (et justifiées) selon les 3 aspects (*soundness*, *verifiability and transparency* et *presentation*). Si un critère n'est pas ou n'est que partiellement satisfait, il est vous est demandé d'expliquer en quoi et de suggérer des améliorations possibles.

Consignes

- Afin de garantir que le processus se fasse de la manière la plus efficace et la plus respectueuse possible, nous vous demandons d'observer les règles suivantes :
  - **Se focaliser sur le rapport lors de l'écriture de la *review*.** Concrètement, cela signifie que la *review* doit porter sur le rapport (par exemple, on écrira « le rapport devrait également présenter […] ») et non sur les auteur·e·s du rapport (par exemple, on n'écrira pas « les auteur·e·s devraient également présenter […] »).
  - Rester poli, courtois et constructif dans la *review*. Le but est avant tout **d'aider les auteur·e·s à améliorer leur rapport de pré-enregistrement** sur base des commentaires.
  - **Traiter les différentes informations en toute confidentialité**. Dans un processus *single-blind*, les évaluateurs·rices peuvent voir qui iels sont, ainsi que l'ensemble des évaluations. Il est de leur devoir de traiter ces informations de manière confidentielle et de ne pas les diffuser.
